Dermatopathology Report				
1	Patient:		Date of Birth:	
	Provider:		Received:	
2	FINAL DIAGNOSIS:			
	Skin of right mid back, biopsy: Lentiginous junctional melanocytic nevus with architectural disorder and focally moderate cytologic atypia (see comment).			
3	DIAGNOSIS COMMENT:			
	Atypical nevus extends close (less than 1 mm) to the periphery of the specimen, but appears to be narrowly excised in these planes of sectioning.			
4	CLINICAL INFORMATION:			
	5 x5 mm flat hyperpigmented lesion, right mid back with marked colon changes and evidence expansion. Atypical pigmented skin lesion. ICD10 code(s): L81.9.			
5	GROSS DESCRIPTION:			
	Received in formalin, labeled "XX" "right mid back" per requisition, is a 0.5 x 0.4 x 0.4 cm cylinder; inked, bisected and entirely submitted in A1.			
6	Jon A. Reed, M.D. Dermatopathologist Electronically signed XX/XX/2015 12:00 (206) 215-5960 <small>Performed at CellNetix Pathology-Seattle, 1124 Columbia Street Suite 200, Seattle, WA 98104 CLIA#: 50D1067441-LLC/50D1004055</small>

1 Find patient and provider information here, as well as the date we received the specimen for testing.

2 In the Final Diagnosis section you will find the Pathologists conclusion based on their interpretation of the specimens or slides.

Additional findings may also be included in this section as well as notes for further tests to be performed.

3 Diagnosis Comment will typically provide supporting information regarding the "Final Diagnosis".

4 Clinical Information provides a brief medical history and background related to the patient.

5 The Gross Description describes the specimen, how the specimen was received and how it was processed.

6 We always include the direct contact information of the pathologists who diagnosed the case, in case you have any questions or need further explanation on the diagnosis.
